Together, we turn ambition into action

Quantech Capital / 01. 03. 2024

An Intuitive Solution for Every customer

Amplify your portfolio using the power Algorithm & Manual Driven Trading technology

We pride ourselves on fostering trust and openness with our clients. Our commitment to transparency extends to our fee structure, ensuring you have a clear understanding of the costs associated with our services. We believe in straightforward communication, providing you with a comprehensive breakdown of fees so that you can make informed decisions about your contribution. Your financial journey is important to us, and we are dedicated to maintaining clarity and openness every step of the way.

Quantech Capital

What we do

Quantechcapital.io offers a selection of highly attuned trading systems, specifically curated to meet different customer needs and risk appetites.

Accepted clients are given access to a selection of trading systems, in which they may choose to join.
Quantech Capital operates as a facilitator between exclusive trading strategies and the retail and institutional customer.
Our team is tasked with continual research into the most exciting, technologically advanced trading systems available within the financial market.

The company serves to meet the unique needs of each customer, providing detailed information and support
to each potential customer considering our services.
With long-term plans for bespoke client portals and 24/7 access to a dedicated fund manager, Quantech Capital will offer an unmatched trading
Experience.

ETF-LOW

ETF-LOW
"Algorithmic Trading Based on Algorithms.
The integrated portfolio currently consists of a total of 900 carefully designed algorithms.
Every day, new data is added to the system. The algorithms operate on a voting system.
With exceptional scalability, this system is engineered to perform efficiently on a robust
nine-figure scale. The average holding time for positions is strategically set
at a two-hour interval,
with deliberate dispersion of positions across a multitude of smaller entries.
Projections indicate an annual performance expectation of around 70%.
Proven Profitability, Automated. Once connected to a Quantech Capital Portfolio,
the process is 100% autonomous, meaning absolutely no need for manual input.
Our Qcap ETF-LOW Strategy boasts an unblemished track record
with a profitability of 96.30% for over 9 consecutive years.

ETF-AI

ETF-AI
A bouquet of auto trading algorithms consists of 4 highly precise algorithms based on price action movement. ETF-AI is one of the many algorithms. ETF-AI is a homegrown auto trader that connects to multiple brokerages to intelligently trade on price action movements.

ETF-AI is intelligent enough to devise its own "entry" and "exit" points for profit in trading, adaptable to various assets and alignments. Stop-loss measures are kept minimal, typically trading on different assets in 1 or 2 lot sizes. While not guaranteeing no losses, this strategy aims for faster short-term profit-making compared to a "trade hold strategy."

Some statistics of strategic performance: The average holding time since inception is 8 to 12 hours, with profitability up to 15% overall month on month. ETF-AI operates completely automated with proven profitability factors since its inception, with zero manual intervention unless decided by the core team.

ETF-MID

ETF-MID
In the fast-moving world of day trading, Indices Scalping has gained popularity as a preferred method for trading indices.
This strategy revolves around executing rapid trades within one minute, aiming to capitalize on minor price fluctuations.Indices Scalping, a short-term trading technique, focuses on exploiting small price swings within various indices.
By utilizing the 1-minute timeframe, traders aim to quickly enter and exit positions to capture fleeting market movements.
This strategy is performed 100% manually by a trader, meaning no automated systems or algorithms are used.
This provides traders with the opportunity to use their skills and intuition to identify and capitalize on opportunities within a short timeframe.

ETF-HIGH

ETF-HIGH
In the fast-moving world of day trading, Indices Scalping has gained popularity as a preferred method for trading indices. This strategy revolves around executing rapid trades within one minute, aiming to capitalize on minor price fluctuations.
Indices Scalping, a short-term trading technique, focuses on exploiting small price swings within various indices. By utilizing the 1-minute timeframe, traders aim to quickly enter and exit positions to capture fleeting market movements.
This strategy is performed 100% manually by a trader, meaning no automated systems or algorithms are used. This provides traders with the opportunity to use their skills and intuition to identify and capitalize on opportunities within a short timeframe.
Furthermore, this strategy is similar to ETF-MID, where profits are taken earlier, while in ETF-HIGH, traders aim to capture higher profits by continuing to trade.

ETF
